Agromet Advisory Based on Weather Forecast Prediction

| Crop Weather Summar General Advi | · | Advisory Weather will remain dry for next five days. However, here will be increase in temperature. |
|----------------------------------|------------|---|
| | isory | temperature. |
| | isory | |
| SMS Advise | · | Farmers should take necessary precautionary measures while spraying |
| SMS Adviso | | insecticide, fungicide etc. |
| SIVIS AUVISO | ory | Sunflower crop becomes ready to harvest in 110 days. Harvesting should be |
| | | done when leaves, stem and back of flower becomes yellow. Threshing must |
| | | be done after drying. |
| Chickpea | - | Spray the crop with 2.5-3ml Chlorantraniliprole 18.5 SC in 10 liters of water |
| | | for the control of pod borer. |
| Onion | Growth | Due to increasing temperature the onion crop may be infested with thrips and |
| | | other sucking pests. To control the thrips spray the crop with Lambda |
| | | cyhalothrin 5 SC @ 6-10 ml nper 10 liter of waterat in interval of 10-15 days |
| | | with a knapsack sprayer. For the management of Blight, spray the crop with |
| | | the mixture of above insecticide with Mancozeb or Chlorothalonil 25 gm or |
|) () () | | Tebuconazol 10 ml. |
| Maize Ge | ermination | Spray the crop with 15 ml Dimethoate 30 EC in 10 liters of water for the |
| N | | control of stem borer, 8-10 days after germination. |
| Nursery | - | Apply 26 kg Carbofuran 3 G per acre in soil followed by light irrigation for |
| W-40 | Carriage | management of root-knot nematodes. |
| Watermelon & Musk melon | Sowing | These crops can be affected by Downy mildew, Powdery mildew, Leaf spottening, Wilt, Mosaic and Bud necrosis. Infestation of Thrips, Aphid and |
| Wiusk illeion | | White fly may occur in watermelon and musk melon. Spray Thiomethoxam 4 |
| | | gm + Mancozeb 25 gm per 10 liters of water using knapsack spray pump when |
| | | watermelon is at 2-3 leaf stage. For the control of Leaf miner, spray the crop |
| | | with 4% NSKE per 10 liters of water using knapsack spray pumps. Apply |
| | | these sprays before flowering. After flowering stage, do not use the sprays of |
| | | Acetamiprid, Imidachloprid and Thiomethoxam, etc. |
| Sunflower H | Iarvesting | Crop becomes ready to harvest in 110 days. Harvesting should be done when |
| | | leaves, stem and back of flower becomes yellow. Threshing must be done after |
| | | drying. |
| Cowpea fodder | Growth | As soon as the incidence of aphids is observed spray NSKE 5 %. If population |
| | | of aphid is high, then spray the crop with 10 ml Dimethoate 30 EC in 10 liters |

| | | of water and avoid feeding of fodder to cattle upto 7 days after spraying of insecticide. |
|--------|--------|--|
| Tomato | Sowing | For the control of thrips and white fly, apply 10 kg Phorate per ha 10 days after transplanting. Irrigation should be done after that. If needed, spray Fipronil 5 EC 15 ml + Mancozeb 25 gm or Carbendazim 10 gm per 10 liters of water using knapsack spray pump. For the control of Fruit borer, spray the crop with Deltamethrin 1% + Triazophos 35% 20 ml or Cyphermethrin 10 EC 10 ml per 10 liters of water using knapsack spray pump. Also spray 4% NSKE at an intermittent interval. |
| Lucern | - | Spray the crop with 50 g <i>Verticillium lecanii</i> (2 x 108 cfu/g) per 10 liters of water for the management of aphids at evening hours. |
| Mango | - | Spray 5 ml Lambda cyhalothrin 5% EC or 10 ml Profenophos 50 EC per 10 liters of water for the control hoppers. |
| Sapota | - | Spray the crop with 10 ml profenophos 50 EC or lambda cyhalothrin 5 EC or deltamethrin 2.8 EC per 10 liters of water for the control of Chiku moth (Nephopteryx eugraphella). |
