							Wind Speed (km/hr)	13	13	13	14	15

### Agromet Advisory Based on Weather Forecast Prediction

Weather SummaryAccording to the weather forecast from the RMC, Mumbai, sky is likely to remain partly cloudy for the next two days. After that, the sky is likely to be dry. Also, on April 26, there is a possibility of very light rain at isolated places.General AdvisoryAs there is a possibility of rain, keep harvested crops in safe place/ shed or covered with plastic paper.SMS Advisoryon April 26, there is a possibility of very light rain at isolated places.OnionHarvestingAfter harvesting onion, while drying in the field, without heaping up, the first onion should be covered with the leaves of the second onion and dried for 5 days. After that cut the leaves with 3-5 cm of onion neck and dry them in shade for 2 weeks.Summer GroundnutPod formation stageGroundnut crop should not be exposed to water stress during pod formation stage (65 to 70 days). If water available give protected irrigation as per need. Leaf-eating larvae have been found in some places in groundnut crop. For control, spray Chlorpyrifos 20 ml per 10 liters of water in a clean environment.PearlmilletGrain Give application of DAP (18:46:00) or Spray 19:19:19 soluble fertilizer 60 and 65 days after sowing 2% solution at 20 gm/liter of water during clear weather condition. Control the blister bittles insect on pearl millet crop by undertake the dusting of Methyl Parathion 2% wp @ 8 kg per acre. (Considering rainfall forecast after 08 th May 2023 or during clear weather).SugarcaneGrowth StageDuring May month the rate of evaporation increases up to 9.24 mm per day. Sugarcane crop needs 9.33 liters of water per day thus for fulfilling that requirement Drip Irrigation Unit(4liters dripper) need to run for 2 hour		0	net Advisory Based on weather Forecast Prediction

## AGROMET ADVISORY BULLETIN GRAMIN KRISHI MAUSAM SEWA, AMFU, RAHURI DEPARTMENT OF AGRONOMY, MPKV, RAHURI.

### Ph. No. 02426 243239

### E-mail: rahuri.amfu@gmail.com

	For management of leaf curl virus, remove infected plant and for
	controlling whitefly vector spray neem based insecticides 10 ml (5 EC) to
	60 ml (0.03 EC) per 10 liters of water during clear weather condition.
Vegetables	Newly planted seedlings should be shaded.
	Arrangements should be made on the side of the field, on the embankment,
	to prevent obstruction of hot winds.
Fruit crops	Newly planted orchard seedlings should be protected from the heat. Also
	drip irrigation should use for irrigation.
Animals	Keep animals in shade and give them plenty of clean and cold water to
	drink.
	Do not make them work between 11 am to 4 pm.
	Give them green grass, protein-fat bypass supplement, mineral mixture and
	salt. Make them graze during cooler hours.
	Cover the shed roof with straw, Also, paint the walls white or plaster with
	dung-mud to reduce temperature.
Poultry	Provide curtains and proper ventilation in poultry house. Also, paint the
-	walls white or plaster with dung-mud to reduce temperature.
