							Wind Speed(km/hr)	29	23	22	23	24

Agromet Advisory Based on Weather Forecast Prediction								
Crop	Stage	Advisory						
Weather S	Summary	According to the weather forecast from the RMC, Mumbai, sky will remain						
		partly cloudy during next five days. There is a possibility of light to medium						
		rain at isolated places during next five days.						
General A	Advisory	1) Use Meghdoot mobile app for weather based crop advisory and prediction.						
		2) Use Damini mobile app for electricity forecasting.						
		Maize: Spray the crop with <i>Azadirectin</i> (1500 ppm) at 5 ml per liter of water						
SMS Ac	dvisory	in a clean environment as a preventive measure for American armyworm						
		control.						
Soybean	Seedling	Install 5 pheromone traps/ha for monitoring of Spodoptera littura.						
Pigeon pea	Seedling	Install Bird perches of T shape @ 50-60/ha in the field. As soon as the						
		incidences of disease are noticed, uproot and destroy the affected plants.						
		To prevent the spread of sterility mosaic disease, when the crop is 20 and 40						
		days old, spray Sulfur 50% (WP) 30 g per 10 liters of water or neem oil 40 ml						
		mixed with 10 liters of water. Spraying should be done only after seeing the						
		rainfall situation.						
Maize	Seedling	Spray the crop with Azadirectin (1500 ppm) at 5 ml per liter of water in a						
		clean environment as a preventive measure for American armyworm control.						
		Spraying should be done only after seeing the rainfall situation.						
Cotton	Square	Cotton usually germinates within 10 days after sowing. Where germination						
	Formation	has not taken place, the seeds of the same variety should be used for planting						
		and apply watered immediately. And after 15 days, place only two vigorous						
		seedlings on each flower and uproot the rest.						
Pearl millet	U	Interculturing operations should be done after 10 DAS						
Groundnut	Seedling	Thinning should be done to maintain proper plant population. To control						
		weed weeding should be done.						
Green gram	Branching	Interculturing operations should be done after 20 to 25 DAS. Thinning should						
Black gram		be done to maintain proper plant population. To control weed weeding should						
		be done.						
Animal		Keeps the animals at safe places during rainy season. Pastoralists should find						
Husbandry		out what kind of worms are in their area. Animal dung should be examined to						
		know the types of worms. Once the type of worms is understood, with the						
		help of a veterinarian select useful and effective intoxicant for control and						
		preventive measures. Animal immunity should be enhanced. So as to curb						
		and control the growth of worms. For this the animals should be given a well						
		balanced diet. It is important to keep the shed clean, dry and well ventilated
