ingluing and munderstorm warning and forecasting.			lightning and thunderstorm warning and forecasting.							
Farmers should refer and use KRISHIDARSHINI published by Mahatama			• Farmers should	ld refer and u	ise KRISHII	DARSHINI p	oublished by	v Mahatama		

		<ul> <li>Phule Agricultural University for all agriculture related information.</li> <li>Water replenishment : Try to ensure that the rainwater do percolate in the field and does not flow/runoff away. Rainwater falling on the roof of the</li> </ul>					
		house should be collected in a tank through a pipe and used for refilling wells or borewells.					
Kharif season		As it would take some time to get <i>wafpsa</i> condition hence farmers should not					
planning		rush to sowing. Care should be taken as rainwater does not accumulate in the					
		fields and for the drainage of excess water, arrangements should be made to					
		remove water from the fields. Hoeing should be done if wafpsa condition is					
		there so that the weeds that have grown will be controlled and the fields will					
		be suitable for sowing. Quality and certified seeds should be planned for					
		sowing of crops in the Kharif season.					
Summer crops	Storage Stage	The harvested produce should be kept at safe storage places and if the					
		produce which is kept in open field should be covered with tarpaulin sheet.					
Cotton		Sowing is done even if the soil temperature has not decreased, there is a					
		possibility of pest and disease outbreak if planted, so do not rush for sowing					
		until the soil temperature decreases.					
Banana	Vegetative	Care should be taken to avoid water logging in orchards and drain out excess					
C	growth stage	water.					
Grapes	Vegetative growth stage	As there is possibility of rainfall, orchards which are completed with April pruning care should be taken to avoid water logging in orchards and drain out					
	growin stage	excess water. Due to rainfall & cloudy weather, for control of anthraxnose					
		spray carbendyanzim 50 WP, 10 gm per 10 lit of water when there are no					
		rains.					
	Post	Light pruning should be done in the orchard where the fruit harvest has been					
Mango	harvesting	completed. Also, spray copper oxychloride 20 grams per 10 liters of water					
Animal	Stage	when there is no rain. Take care that contaminated or silt-mixed water does not enter the drinking					
Managemen		water of the animals. Deworm the animals. Sulfa tablets should be used for					
t		the disease due to eating of green grass Do not tie the animals in open spaces.					
		Keep them in a barn, shed or strong building.					
		The country's first animal health mobile system (app) Phule Amrutkal App,					
		developed by the Department of Animal Husbandry and Dairy science under the Indigenous Cattle Pessearch and Training Centre (ICPTC) of Mehatma					
		the Indigenous Cattle Research and Training Centre (ICRTC) of Mahatma Phule Krishi Vidyapeeth, at the College of Agriculture, Pune, was launched					
		for farmers and farmers should download and install it in their mobile and get					
		weather based animal advisories.					
		Benefits of Phule Amrutkal App Download :					
		This app will advise farmers and instructions will be given from time to time					
		on how to alleviate heat-related stress in cattle, reduce the temperature in the cowshed and maintain proper humidity, provide shade, maintain proper					
		ventilation, provide cold water for drinking, start the fan or fogger system					
		automatically, and plan a balanced diet, etc.					
	Note: Farmers should take necessary precautionary measures while spraying insecticide, fungicide etc.						
and use Kisan Kavach Body Suite.
