# AGROMET ADVISORY BULLETIN GRAMIN KRISHI MAUSAM SEWA, AMFU, KOLHAPUR ZONAL AGRICULTURAL RESEARCH STATION, SHENDA PARK, KOLHAPUR

### Ph. No. 0231 2692416

## E-mail: adrkolhapur@rediffmail.com

		flowering stage to grain filling stage
Rabbi	Sowing	Carry out sowing of rabbi sorghum at vafasa condition in soil at 5 cm depth upto 15 <sup>th</sup> October
Sorghum	0	Spacing :45x15cm,
J		Seed treatment: Apply 4 gram Sulphur (300 Mesh) and 25 gram Azatobactor and P.S.B.
		Culture to per kg of seed.
		Fertilizer Dose: Medium Soil give fertilizer dose of N:P:K 40:20:00 kg per hector out of
		which ½ Dose of Nitrogen and Full dose of Phosphorus should be given at the time of sowing.
Chick Pea	Presowing	Collect the inputs required for sowing of rabbi chickpea and Carry out sowing of rainfed
		chickpea during 20th September to 10th October at sufficient moisture condition (vafasa) in
		soil.
		Use Vijay, Digvijay, Phule Vikram and Phule Vishvaraj varieties for sowing.
		Seed treatment: Treat the seeds Trychodarma Harjiyanam 1.0% W.P. 6 gram per kg of sees
		for prevention from Neck rot and root rot then trat the seeds with 250 gram Rayzobium and
		P.S.B. per 10 kg of Seeds by mixing in cold Jaggary solution. Dry this treated seed under
		shade almost for 1 hour and then carry out sowing.
		> For control of Gram Pod borer through Integrated Pest Management carry out sowing of 200
		gram of Sorghum by mixing in Chick Pea.
Soybean	Maturity	> Harvesting of Soybean should carry out after pods gets yellowish red colour and after
·		completion of 90 to 110 days from sowing as per the maturity of crop variety. If harvesting
		delays pods breaks and seeds gets shattered in field. Harvesting should carry out nearer to
		ground with help of sharp sickle.
Groundnut	Maturity	Groundnut leaves turns yellow, shell of pods become tough and inner side of shell gets
		blackish colour after attaining maturity. Carry out harvesting of matured crop. Harvested pods
		should be dried under sunlight as soon as sunlight gets available then store dried pods at dry
		and safe place. Do not store pods in wet and humid place.
Sugarcane	Growth	> Apply Urea @110 kg per hector which is 10% of Nitrogen dose means 50 kg Nitrogen per
		hector of the total recommended dose (500:200:200 kg Nitrogen: Phosphurus:Potash) for Co.
		86032 (Nira) variety. Use 40 kg Nitrogen i.e. 87kg Urea per hector to other varieties of
		Sugarcane.
Chilli	Flowering	> There is possibility of incidence of thrips on Chilli due to humid and cloudy condition. Thus if
		incidence observes then spray the crop with Imidacloprid 17.8 % S.L. 5ml or Fipronil 5 %
		S.C. 20 ml per 10 liters of water.
		Use Blue sticky traps @ 10 to 12 per acre.
Brinjal	Flowering to	> Due to increase in day temperature there is possibility of increase incidence of Egg plant fruit
	fruit	and shoot borer (EFSB) thus to control spray the crop with 5% Neem seed Kernal Extract or
	development	Spinosad 45%S.C. @ 4 ml per 10 liters of water.
		Use 40 Pheromone traps (Funnel type) @40 per acre.
Animals	Growth	Do not allow animals for grazing during warning period.
		> Due to increase in Tmax the animals should be kept under shade. Give sufficient, pure and cool
		drinking water to animals.
		If deworming is completed then carry out vaccination for prevention of Foot and Mouth
		disease from authentic skilled veterinarian
